

Systems (HTS/ETS)

The **hidden tension system (HTS)** and **exposed tension system (ETS)** are also available from the factory for select applications. The tension systems are used with various weave designs for applications such as interior room dividers or cladding of existing interior or exterior wall surfaces. For additional information regarding either tension system, please contact the factory or your local fabricator.

Shown is a very unique concept design using a variable density mesh pattern. It is installed utilizing a project specific system which allows an innovative approach for using mesh as a room divider or other applications.

GW Sequence (SS – prototype)
